

Permission for Participation

Dear Student Athlete parent,

Lexington Christian Academy will be participating in a concussion management program in collaboration with Cardinal Hill Rehabilitation Hospital. This year, athletes will be given the opportunity to complete a computerized test called ImPACT prior to the start of the season. The purpose of this test is to provide a pre-season baseline assessment of your child's brain processing speed, reaction time, visual memory and attention span. The test takes approximately 20-30 minutes to complete.

During the season, if your child presents with symptoms related to a concussion or head injury, repeat computerized testing will be completed in the days following to track your athlete's recovery. This medically based program will assist Lexington Christian Academy's athletic trainers and medical staff with evaluating an athlete's timely and safe return-to-play.

Please provide your authorization for your child to participate in the pre-season ImPACT testing. This will be provided by Cardinal Hill and at no cost to the parents or school.
